

CoCare

CoCare will be a platform that enables care workers, provider agencies, social workers, commissioners, health professionals, charities, service users and families to work together to provide better care and support.

App

All of the people involved in supporting a person to live independently in their home will be able to use the app to securely communicate with each other.

Care workers will record visits quickly using the app's simple interactions and family members, agencies and social workers will be able to see when the visits start and end.

At the end of each visit the care worker will be asked up to 3 questions, providing a simple way of measuring outcomes.

Dashboards

The web portal dashboards will provide information for commissioners, agencies and social workers.

The dashboards will provide summary information which can support more effective management of home care contracts and promote better understanding of population-level changes to social care needs and health conditions.

The dashboards will also provide information about an individual service user's care to manage risks and support more personalised services.
